ABSTRACT OF THE DISCLOSURE

[0045] A system and method for message addressing and address storage are disclosed. A system incorporating teachings of the present disclosure may include an address menu having an identification field with more than one associated address fields. Each of the address fields may be maintaining addresses for different messaging receipt options. For example, if an intended recipient of a message has an email account and a facsimile machine, a first address field may maintain an email address for the recipient, and a second address field may maintain a facsimile number for the recipient.
